

EXPERIENCE THE NEXT GENERATION  
COMPOSITE THAT ELEVATES YOUR

A R T I S T R Y

*Introducing*

**Harmonize™**

The next generation composite infused  
with Adaptive Response Technology

**NEW**

# LIFELIKE RESTORATIONS NEED YOUR TOUCH— AND **ART**

Harmonize™ begins with **ART**. **A**daptive **R**esponse **T**echnology, a nanoparticle filler network that helps you achieve lifelike restorations with more ease and simplicity than ever. With better blending capabilities and enhanced structural integrity, the **ART** of Harmonize provides your restorations with exceptional strength and unmatched esthetics. It's science and beauty coming together at last.

## ESTHETICS

### HARMONIZE IS REMARKABLY DIFFICULT TO DETECT

The **ART** filler system in Harmonize diffuses and reflects light in a similar way as human enamel, for an enhanced chameleon effect!

**Better blending** than leading composites such as Filtek™ Supreme Ultra!

**Better and more consistent** polishability with ProGloss™ than other materials.

**Superior gloss retention** compared to leading composites (such as TPH Spectra®, GrandioSO and Tetric EvoCeram®).

Harmonize provided highest gloss value and most consistent polish<sup>2</sup>

<sup>2</sup>Study conducted at University of Alabama, 2016.

# STRENGTH

## EXPERIENCE INCREASED STRENGTH AND DURABILITY

Careful control of the size and shape of the **ART** filler system permits high loading - 81% - for excellent strength.

**Reinforced nano-scale filler particle network** has improved mechanical properties and is more reactive with resin for more efficient polymerization.

**Superior strength** to Filtek Supreme Ultra, Tetric EvoCeram, Estelite Sigma Quick and Admira Fusion.

**Longer lasting**, more likely to resist chipping and fracture over time!

Greater fracture toughness compared to most other composites<sup>1</sup>

# HANDLING

## ADAPTIVE VISCOSITY OFFERS EASIER HANDLING

The **ART** filler network features high loading and a spherical shape to minimize stickiness while also incorporating a rheological modifier. This provides adaptive viscosity: it's softer while sculpting, making it easy to shape the composite. When sculpting is complete, the viscosity increases, which prevents the material from slumping.

**Less pullback and fewer cavosurface voids** because Harmonize doesn't stick to your composite instruments.<sup>1</sup>

**Reduced time** required for trimming and finishing.<sup>2</sup>

# 94%

OF LEADING US DENTISTS RATED HARMONIZE EXCELLENT IN HANDLING<sup>3</sup>

In a blind evaluation, 94% of leading US dentists stated Harmonize had excellent handling characteristics including stickiness, carvability, spreadability, and viscosity.

An esthetic restoration is a feat of engineering. Harmonize™ provides the optical and handling characteristics to help you build something both beautiful and functional.
